

# 2012 FISKER KARMA THE COMMAND CENTER

Fisker Automotive and Visteon Corporation have teamed up to deliver one of the most extraordinary user interfaces ever to hit the road. With their expert use of Altia's HMI engineering tools, Visteon was able to bring Fisker's vision to reality – with results that have dazzled automotive industry experts and car lovers alike.

"As good as Audi's MMI and BMW's latest iDrive interfaces may be, they have a real competitor in the first-generation Visteon-Fisker Command Center. The touchscreen is terrific work and handles its several clever menus and graphics intuitively and attractively. If it only gets better from here, Fisker may be in the onboard computer functionality and interface business before long."

*Autoblog.com*

"Of course the interior's thick with artistry as well, the centerpiece being the beautifully rendered...graphics on the 10.2-inch multi-function 'Command Center' touch screen."

*Motor Trend*

"The Karma's digital instrumentation and 10.2-in. touch-screen are exemplary in clarity and function. Suffice it to say, I'd place these among the best in class."

*Road & Track, May 2011*

**Good Karma, indeed. With a talented team and Altia tools,  
your product can be the CENTER OF ATTENTION.**
